

Amendment Submitting The Abstract

The Abstract Of The Disclosure is submitted herewith on a separate page
(in the Appendix).

Abstract of the Disclosur

A process for manufacturing a flexible packaging material from a single or multi-layer film or film-type laminate which includes a sealing layer (14) which is deposited locally on at least one free surface of the film or film-type laminate (7) on the areas to be sealed, where the local deposition is performed using an electrostatic coating process in which the coating particles are electrostatically charged and are transferred to the film surface to be coated using transfer means by applying an electric field, and, then, are melted to give a coating film in the form of a coating later, and, subsequently, are solidified.
